

Rental Mould Temp Units

Need a mould temperature controller fast to manage a breakdown or need a unit for a short-term product trial?

No problem. Tricool's range of mould temperature controllers are now available to hire. The units help heat or temperature control injection moulding machines and can provide **thermoregulation** to oil or water heating processes such as jacketed vessels, printing presses and chocolate production.

All rental units are British-built in the company's Southampton-based production facility and are provided on a same day or next day delivery basis, from a **3 - 96kW** range of portable rental units.

Tricool's Mould Temp Range

Tricool's **Manufacturing Director, Dave Palmer** explained, "We have been developing our range of rental mould temperature controllers for 12 months and have conducted trials with customers over this period, which have provided us with some excellent results."

Our Range

Our customers are now able to choose from a range of **10** products offering oil heating up to **350°C**, **water heating to 160°C** and a **combination** of both from one single unit.

Our **Mould Temp rental range** will help our customers to manage a breakdown to their incumbent kit by renting one of our units, which can be delivered next day to anywhere in the UK or, in extreme cases, same day rapid despatch.

Short Term Project Help

As an alternative, we can also offer rental units to help with trials for pharmaceutical or chemical companies, where they don't have to commit to capital plant until their NPD is complete and proven. We can rent a unit for as long as they need for very good rental rates.

We now have a very good selection of stock at our Southampton base that can be shipped out next day in emergencies to help maintain production for customers in need of a temporary fix.

Dave Palmer - Tricool Thermal's Manufacturing Director

Experience Counts

Tricool's product is British-made and has the benefit of 30 years experienced production and product control. All units are built within ISO9001 controls and CE marked."

Tricool, who operate throughout Europe, also rent air and water-cooled chillers, air blast coolers, air handling units, fan coils and air conditioners.

All rentals include 24/7 maintenance throughout the project period.
