

Tricool Thermal launch Mould Temp

Temperature Control experts Tricool Thermal are pleased to announce the launch of a brand new compact heater, the Mould Temp.

Tricool Thermal's new mould heater, the Mould Temp

Britain's largest manufacturer of bespoke heating and cooling equipment have specifically designed the Mould Temp (pictured above) for the **Plastics industry** for injection moulding tools.

The Mould Temp has been designed and tested in the UK, and will be manufactured in Tricool Thermal's ISO9001 accredited facility in Southampton (pictured right).

Value for Money

Reliable and cost-effective, this specially designed unit is capable of providing **6kW heating capacity** and temperatures up to **95°C**, set to become the most compact on the market and most economic for cost against performance.

Tricool Thermal's
Manufacturing Director
Dave Palmer

Manufacturing Director, Dave Palmer (pictured left) commented, "The Mould Temp is a reliable and compact unit, built using high grade, quality components.

Costing just **£745.00**, the Mould Temp provides our customers with a cost effective alternative to units currently available on the market."

Design and Quality

Featuring high grade, quality components and a non-ferrous submersible pump, this quality built unit has been designed to be corrosion resistant to last and last.

The Mould Temp has been designed with the user in mind, with easy operation and reverse polarity connectors for leak stop mode.

Tricool Thermal's UK manufacturing facility in Southampton

Tricool Thermal has a full range of standard temperature controllers, offering water heaters up to 95°C, oil heaters up to 350°C and dual heating and cooling units. Bespoke manufacturing for heating and cooling is also available to suit your specific site requirements.
