

Tricool Thermal update their Thermoregulator range

Britain's largest industrial heating and cooling manufacturer, with over 30 years experience in the production of standard and bespoke precision heating and cooling equipment now have an updated suite of temperature controllers. Designed to service the UK and our expanding European Markets the units now have easy to identify names, clearly showing the heating capacity and fluid medium.

The range of standard units now available starts from a 6kW water heater (giving temperatures up to 95°C) and progress through pressurised water heaters (giving temperatures up to 160°C) and up to the very high temperature oil heaters reaching 350°C.

Ongoing Value

Reliable, flexible and energy efficient, this quality range addresses every price point, with compact solutions specially designed for the entry level market through to units equipped to deal with more demanding needs and bespoke elements to suit exact requirements.

Energy Efficiency

These units are highly energy efficient with minimal pipes and valves, high insulation and usually only a small reservoir tank required - all contributing to the lower energy needs of Tricool Thermoregulators to reach and maintain the temperatures required.

Design and Quality

Using high grade, non-ferrous quality components and packed with features these units have been designed to be corrosion resistant with most also including self cleaning solenoid valves, stainless steel heat exchangers, solid state relays and diagnostic controllers to monitor and alert faults to the user.

Keith Holroyd, Quality Manager explains "We are proud to support all the units we design and manufacture in the UK, with strict conformance to exacting CE standards and quality controlled through our ISO9001:2008 accreditation".

Peace of Mind

Designed with the customer in mind, these units offer excellent serviceability with limited maintenance needs, easy operation with simple and clear user interfaces and temperature controls that can produce precision 'degree accurate' temperatures at the touch of a button.

Custom build

Tricool Thermal can also offer bespoke manufacturing solutions for any type of heating and cooling need, designed to suit your specific site requirements.
